Autofiller

A privacy-first Chrome extension for filling simple, non-sensitive web forms

Author: @rootadbc

What It Does

Autofiller is a Chrome extension that fills simple form fields for you.

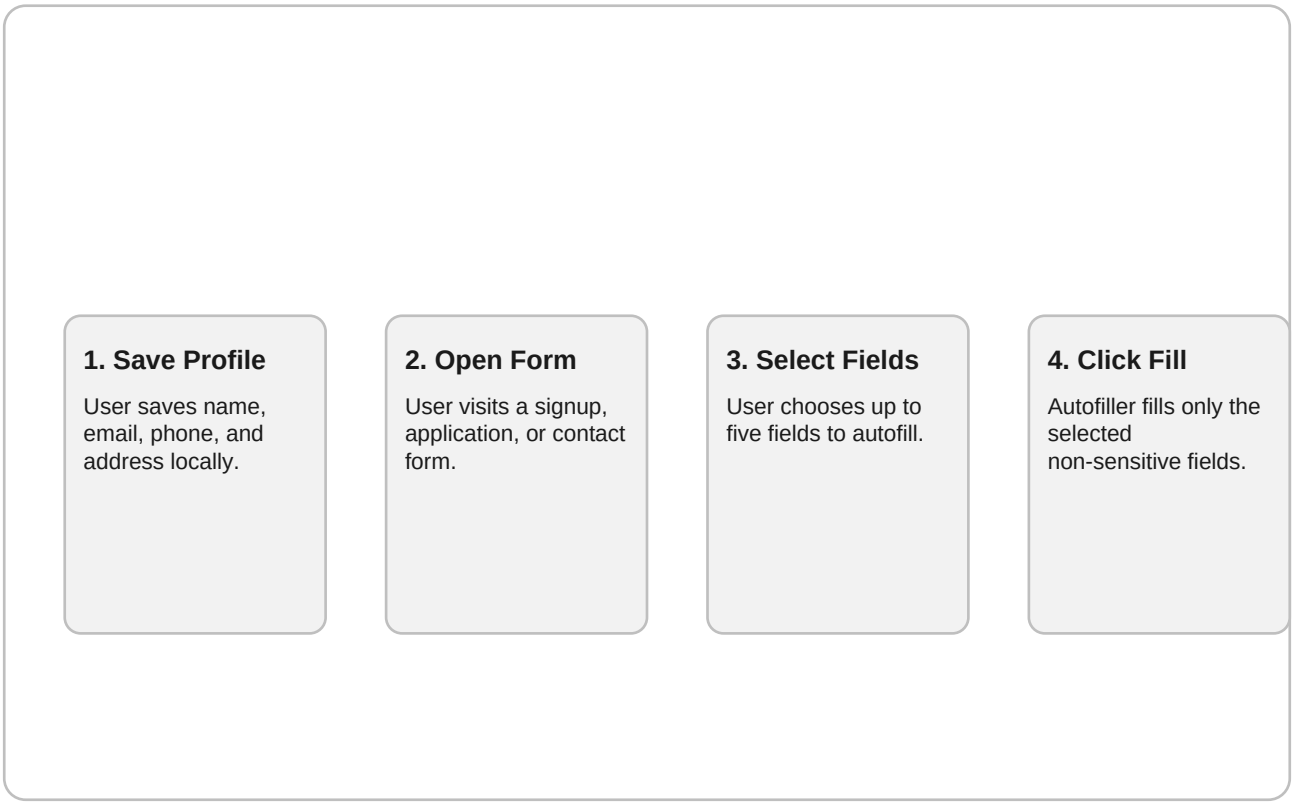
You save basic details such as your name, email, phone number, and address.

When you visit a form, you choose which fields to fill and click Fill.

It does not save passwords, card details, or submit forms automatically.

All saved information stays locally on the user's computer.

How It Works



Privacy Rule

No passwords. No payment details. No cloud sync. No automatic form submission.

Technical Summary

Built with Chrome Manifest V3, JavaScript, HTML, CSS, content scripts, a popup, an options page, and local Chrome stora
